You Are Invited!

Testing Testing

Open Day
Tuesday 6th Sept
(Noon till Late!)

To coincide with visitors arriving for Offshore Europe 05, we invite you to meet our team and tour our facilities.

On display will be:

- Titan Sonar
- Mercury Sonar
- Hawkeye Cameras
- RoxAnn GD

Refreshments will be served throughout the day and transport will be available to and from Offshore Europe.

RSVP

to:
info@sonavision.co.uk

Look forward to seeing you there!

We thought that we'd give you a taster of the test facilities.

All our sonars are dynamically tested and cycled to full operating depth before leaving our factory.

Every sonar is supplied with a certificate confirming that it has satisfied the hydrostatic pressure test at its maximum operating depth.

HP Test Equipment (max 4500psi)

The environmental chamber is used to ensure our equipment will operate as expected in extreme environments from -40° to +60°C.

Environmental Chamber

Tank (3m x 3m x 4m)

All our sonars are tested in our specially built tank. Measuring 4m x 3m x 3m deep it is lined with an acoustic baffling wall. This helps to measure sonar performance during development and test.

Specialist equipment measures power output and sensitivity of our sonar transducers.

All our testing facilities are available for hire by the day or hour, just contact us at:

service@sonavision.co.uk

We've Just Delivered..

Two complete Subcom 2000 systems have just been shipped in the past few days. One is off to Fugro Marsat (Brazil) for installation on the DSV Toisa Sentinal.

The other is headed for the other side of the world to *The Shipping Corporation of India* and will be installed onboard the *DSV Samudra Prabh*.

More...

It's All Greek To Us....

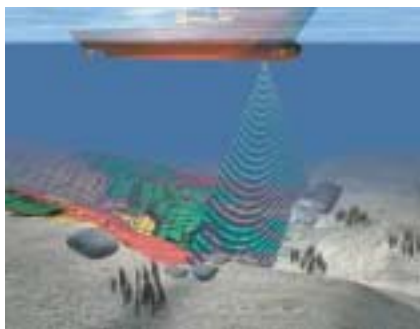

The fishing industry in Greece was recently introduced to **RoxAnn GD** at the Fisheries Show by El Mare, marine electronics dealers based in Piraeus.

Yiannis Melissourgakis is excited about introducing RoxAnn GD to the industry.

Of course RoxAnn already has a long history in Greece, having been used since 1997 by the Hellenic Marine Research Centre (HMCR), (formerly Institute MBC).

It has been used for numerous studies in the region particularly seagrass research.

Now the fishing industry will reap the benefits of installing **RoxAnn GD** onboard their vessels.

Free Sonar Technician Training

Mercury, Titan	19th Sept
SV2000, 4000, 6000	11th Oct
Sonavision Operating Software	26th Oct

Meet Us Again At

Icelandic Fisheries Exhibition 2005

Booth B11

7-10th September

Kopavogur, Iceland

UUVS

Booth 415

September 28-29th

Southampton, UK

Meet the Team

Ravi Chundu holds a degree in Electronic and Communications and is the Development Engineer here.

Graduating in India, he's spent several years gaining industry recognised software qualifications. On moving to the UK with his young family, he spent time as a Systems Analyst in London before moving to the *frozen north*.

He's put all his talents to good use here, working on both hardware and software development of our new products including: **RoxAnn GD**; **RoxAnn Swath** and of course, **TITAN** and **Mercury** sonars.

You can contact Ravi at:

development@sonavision.co.uk

RoxSwath Training

A training course on the operation of **RoxAnn & RoxSwath Systems** will be held at Washington College, Chestertown, Maryland on 12/13th Oct 2005.

Lectures on theory and installation of equipment will be followed by field operations and post-processing.

Spaces are on a "first come basis", so contact Dr John Seidel on:

jseidel2@washcoll.edu

More Deliveries

iicorr in Aberdeen have just taken delivery of customised **Hawkeye Inspection Cameras**, modified for use in offshore caisson and riser inspection.

Hawkeye Camera
